Expanded Game Design Document (Vehicle-Free Version)

Vision Statement

Echoes of the Last Star is an open-world action RPG focused on exploration, survival, settlement building, player choice, and mystery. The player uncovers the truth behind a fallen colony while discovering that their own forgotten past is tied directly to the world's destruction.

Narrative Goals

Create a story that rewards curiosity, encourages exploration, and forces players to confront philosophical questions surrounding freedom, unity, identity, and memory.

World History

Humanity escaped Earth aboard generation ships. The Ardent disappeared and eventually reached a distant world orbiting a dying blue star. The settlers discovered The Chorus, an ancient alien machine capable of linking minds. A civil war erupted, collapsing civilization.

Act I - Awakening

Kai awakens alone and begins scavenging abandoned settlements. The first hours focus on survival, gathering resources, establishing a shelter, and discovering evidence that humanity once thrived here.

Act II - Discovery

Kai encounters the Freeborn and learns of the Ascended. Exploration expands into dangerous territories containing ancient ruins and forgotten technology.

Act III - Revelation

The player discovers Echo Chambers that contain fragments of Kai's previous lives. The mystery shifts from what happened to humanity to what happened to Kai.

Act IV - Convergence

The factions begin mobilizing toward The Chorus. Major settlements become battlegrounds while players choose allies and shape the future of the world.

Act V - The Last Star

The final act takes place inside and around The Chorus itself. Every major decision influences the ending and determines the fate of humanity.
