

Echoes of the Last Star - Storyboard

Genre

Open-World Action RPG + Survival + Base Building

Premise

Five hundred years ago, humanity escaped a dying Earth aboard massive generation ships. One ship, The Ardent, vanished before reaching its destination. You play as Kai Mercer, a scavenger who awakens from cryosleep on a mysterious planet orbiting a dying blue star. The colony is gone, the cities are abandoned, and strange mechanical creatures roam the wilderness.

Main Story

Kai discovers that the colonists never disappeared. They evolved after activating an ancient alien structure known as The Chorus, a living machine capable of merging minds into a collective consciousness. The resulting conflict shattered civilization. Now The Chorus is awakening again—and it has noticed Kai.

Core Gameplay Loop

Explore diverse biomes, fight hostile factions and creatures, build settlements, recruit survivors, research technologies, and upgrade Kai through cybernetics, alien powers, weapons, vehicles, and advanced base technology.

Major Factions

The Ascended seek unity through a hive consciousness. The Freeborn fight to preserve individuality and destroy The Chorus. The Wardens are ancient AI caretakers determined to protect The Chorus at any cost.

Story Twist

Kai was never asleep for 500 years. Their memories have been erased repeatedly. The player gradually learns that previous versions of Kai have already attempted—and failed—to stop The Chorus. Ancient ruins are actually remnants of Kai's forgotten lives.

Endgame Choices

Destroy The Chorus, preserving freedom but forcing civilization to rebuild. Join The Ascended, ending conflict at the cost of individuality. Or become the new Chorus, creating a future between freedom and unity.

Project Scope

Mid-sized version: 4 biomes, 15–20 hour story, one large map. Large version: 8–10 biomes, settlement management, vehicles, multiple endings, and 40+ hours of gameplay.
